AMENDMENT OF THE CLAIMS

The listing of claims below replaces all prior versions, and listings, of claims:

1	1.	(Original) A method of performing parallel data operations upon data in a	
2	database, comprising:		
3		receiving a data transaction request in a client system; and	
4		executing a plurality of multi-phase parallel tasks in response to the	
5	request to pe	rform the data operations upon the data in the database.	
1	2.	(Original) The method of claim 1, wherein receiving a data transaction	
2	request comp	prises receiving a request for loading data into the database.	
1	3.	(Original) The method of claim 1, wherein receiving a data transaction	
2	request comp	prises receiving a request to perform a data transformation operation upon the	
3	data in the da	atabase.	
1	4.	(Original) The method of claim 3, wherein receiving a request to perform	
2	the data trans	sformation operation comprises receiving a request to perform one of a data	
3	selection ope	eration, a data validation operation, a data cleansing operation, and a data	
4	query operat	ion.	
1	5.	(Currently Amended) The method of claim 1, wherein executing the	
2	multi-phase parallel tasks comprises executing each of the parallel tasks in one or more		
3	plural phases	s.	
1	6.	(Currently Amended) The method of claim 5, comprising executing a first	
2	parallel task in a first number of phases and a second parallel task in a second, different		
3	number of pl	nases.	
1	7.	(Currently Amended) The method of claim 5, further comprising each	

parallel task providing a code to indicate if the task is to be re-invoked in the next phase.

components; and

1	8.	(Original) The method of claim 7, wherein providing the code comprises	
2	providing the code to a task coordinator.		
1	9.	(Original) The method of claim 8, wherein the code comprises a first code	
2	to indicate th	at the task coordinator is to invoke a component in the next phase.	
1	10.	(Original) The method of claim 8, wherein the code comprises a second	
2	code to indic	ate that the task is not to invoke a component in the next phase.	
٠			
1	11.	(Currently Amended) The method of claim 1, further comprising:	
2		analyzing the transaction request;	
3		creating a task plan in response to the transaction request;	
4		implementing the task plan in a multi-phase organization;	
5		executing a plurality of tasks in parallel to implement the task plan, in	
6	response the	launching of the task coordinator function;	
7		determining whether an additional phase is required in order to execute the	
8	task tasks; an	ad .	
9		scheduling an additional phase in response to the determination that an	
10	additional phase is required.		
1	12.	(Original) The method of claim 11, wherein implementing the task plan	
2	comprises cr	eating a job script.	
1	13.	(Currently Amended) The method of claim 11, wherein implementing the	
2	task plan con	nprises:	
3		translating the task plan;	
4		selecting a plurality of software components to implement the translated	
5	task plan;		
6		assigning a plurality of processes corresponding to the software	

creating a communications channel to allow for communications between 8 9 the processes. (Currently Amended) The method of claim 13, wherein selecting the 14. 1 2 plurality of software components to implement the translated task plan comprises selecting the plurality of software components to perform at least one of a data extraction 3 4 operation, a data transformation operation, and a data loading operation. 15. (Currently Amended) An apparatus, comprising: 2 a user interface; 3 a processor coupled with the user interface, wherein the processor receives 4 a data transaction request from the user interface; and a controller coupled with the processor, wherein the controller performs a 5 number plurality of tasks in parallel based upon instructions received from the processor, 6 7 each task performed in a plurality of phases. 1 (Original) The apparatus of claim 15, wherein the processor generates a 16. task plan in response to the data transaction request. 2 1 17. (Original) The apparatus of claim 16, wherein the controller comprises a 2 task coordinator to execute the task plan. (Original) The apparatus of claim 16, wherein the controller further 1 18. 2 comprises a plurality of components to implement the task plan in parallel. (Original) The apparatus of claim 18, further comprising a 1 19. communications interface for enabling communications between the components. 2 (Original) The apparatus of claim 18, wherein the controller further 1 20.

comprises a storage unit for storing methods and functions to execute the task plan.

2

1	21.	(Currently Amended) The apparatus of claim 15, wherein the [[a]]
2		coupled with the processor, wherein the controller performs a number of
3	tasks in paral	llel based upon instructions received from the processor, each task performed
4	in a plurality	of phases further comprises the controller performing the tasks in a
5	sequence of r	multiple process steps.
1	22.	(Currently Amended) A system, comprising:
2		a database system; and
3		a network; and
4		a client system separate from the database system and coupled to the
5	database syst	tem over the network, the client system to establish plural sessions with the
6	database syst	tem to implement a plurality of data operations upon the database system in
7	parallel./	
1	$\sqrt{23}$.	(Cancelled)
1	24.	(Currently Amended) The system of claim 23 22, wherein the database
2	system is a p	arallel database system.
	,	
1	25.	(Currently Amended) The system of claim 22, wherein the client system
2	comprises:	
3		a processor to receive a data transaction request;
4		a plurality of operators to perform parallel data operations in response to
5	the data trans	saction request;
6		an operator interface coupled to the operators, wherein the operator
7	interface allo	ows communications between the operators.
	1	
1	$\sqrt{26}$.	(Cancelled)
-	/	(Cancelled)
1	$\sqrt{27}$	(Cancelled)

- 29. (Currently Amended) The article of claim 28, wherein the instructions when executed cause the client system to execute each of the parallel tasks in one or more plural phases.
- 1 30. (Currently Amended) The article of claim 29, wherein the instructions 2 when executed cause the client system to execute a first parallel task in a first number of 3 phases and a second parallel task in a second, <u>different</u> number of phases.
- 1 31. (Original) The article of claim 29, wherein the instructions when executed cause each parallel task to provide a code to indicate if the task is to be re-invoked in the next phase.
 - 32. (Original) The article of claim 31, wherein the instructions when executed cause the parallel task to provide the code to a task coordinator.
 - 33. (Original) The article of claim 32, wherein the code comprises a first code to indicate that the task coordinator is to invoke a component in the next phase.
- 1 34. (Original) The article of claim 32, wherein the code comprises a second code to indicate that the task is not to invoke the component in the next phase.

1	35.	(Original) A method of performing parallel data operations upon data in	
2	database, comprising:		
3		receiving a data transaction request; and	
4		executing a plurality of synchronized multi-phase parallel tasks in	
5	response to t	he request to perform the data operations upon the data in the database.	
1	36.	(Currently Amended) The method of claim 35, wherein executing the	
2	multi-phase	parallel tasks comprises executing each of the parallel tasks in one or more	
3	plural phases	5. ·	
1	37.	(Currently Amended) The method of claim 36, comprising executing a	
2	first parallel	task in a first number of phases and a second parallel task in a second,	
3	different nun	nber of phases.	
1	38.	(Original) The method of claim 36, further comprising each parallel task	
2	providing a c	code to indicate if the task is to be re-invoked in the next phase.	
1	39.	(Original) The method of claim 38, wherein providing the code comprise	
2	providing the	e code to a task coordinator.	
1	40.	(Original) The method of claim 39, wherein the code comprises a first	
2	code to indic	ate that the task coordinator is to invoke a component in the next phase.	
1	41.	(Original) The method of claim 39, wherein the code comprises a second	
2	code to indic	ate that the task is not to invoke a component in the next phase.	
1	42.	(Currently Amended) The method of claim 39, wherein the code	
2	synchronizes	the operation of one or more component components.	

1	43.	(New) The method of claim 1, wherein executing the plurality of multi-	
2	phase parallel tasks comprises:		
3		executing at least first and second software components in parallel;	
4		each of the first and second software components performing one or more	
5	operations in	a first phase;	
6		waiting for a message from each of the first and second software	
7	components	prior to proceeding to a second phase; and	
8		each of the first and second software components performing one or more	
9	operations in	the second phase.	
1	44.	(New) The method of claim 43, further comprising:	
2		waiting for another message from each of the first and second software	
3	components	prior to proceeding to a third phase;	
4		the first software component performing one or more operations in the	
5	third phase; a	and	
6		the second software component being idle in the third phase.	
1	45.	(New) The method of claim 44, further comprising:	
2		receiving a first message from the first software component indicating that	
3	the first softv	ware component is to be re-invoked in the third phase; and	
4		receiving a second message from the second software component	
5	indicating th	at the second component is not to be re-invoked in the third phase.	
1	46.	(New) The apparatus of claim 15, wherein the controller comprises at least	
2	first and seco	and software components executable in parallel to perform the plurality of	
3	tasks;		
4		wherein each of the first and second software components is executable to	
5	perform one	or more operations in a first phase;	
6		the controller to wait for a message from each of the first and second	

software components prior to proceeding to a second phase; and

9

operations in the second phase.

		•
8		wherein each of the first and second software components is executable to
9	perform one	or more operations in the second phase.
1	47.	(New) The apparatus of claim 46, wherein the controller is adapted to
2	further wait	for another message from each of the first and second software components
3	prior to proce	eeding to a third phase;
4		wherein the first software component is executable to perform one or more
5	operations in	the third phase, and the second software component is idle in the third
6	phase.	
1	48.	(New) The apparatus of claim 47, wherein the controller is adapted to
2	further:	
3		receive a first message from the first software component indicating that
4	the first softv	ware component is to be re-invoked in the third phase; and
5		receive a second message from the second software component indicating
6	that the secon	nd component is not to be re-invoked in the third phase.
1	49.	(New) The system of claim 22, wherein the client system is adapted to
2	execute plura	al tasks in parallel, each of the plural tasks executable in plural phases.
1	50.	(New) The article of claim 29, wherein executing each of the parallel tasks
1		
2	in piurai piia	ses comprises: executing at least first and second software components in parallel;
3		each of the first and second software components performing one or more
4	4	
5	operations in	a first phase;
6		waiting for a message from each of the first and second software
7	components	prior to proceeding to a second phase; and

each of the first and second software components performing one or more

	1	51.	(New) The article of claim 51, wherein the instructions when executed
	2	cause the clien	nt system to further:
	3		wait for another message from each of the first and second software
	4	components p	rior to proceeding to a third phase;
	5		cause the first software component to perform one or more operations in
	6	the third phase	e; and
/	7		cause the second software component to be idle in the third phase.
	1	52.	(New) The article of claim 51, wherein the instructions when executed
	2	cause the clien	nt system to further:
	3		receive a first message from the first software component indicating that
	4	the first softw	are component is to be re-invoked in the third phase; and
	5		receive a second message from the second software component indicating
	6	that the secon	d component is not to be re-invoked in the third phase.
